

Adenanthos

FAMILY	- Proteaceae
GENUS	- Adenanthos
SPECIES	- Sp.
VARIETY	- Chris Tal, Aviv
COMMON NAME	- Woolly Bush
ORIGIN	- Western Australia

ADENANTHOS is an evergreen shrub. It has soft silvery green-grey foliage. Leaves are deeply lobed of feather-like texture, 35 to 40 mm long.

ADENANTHOS can be grown in most soils and can tolerate mild frost up to -7 degrees C°. Can be grown in most drained soils and full to semi sun with the optimum pH being 5.5-6.5

It doesn't require much fertilizer or water and is relatively unaffected by pests. It grows well in full sun as well as in partial shade.

ADENANTHOS "Chris TAL" is a good cut foliage plant up to 3 m. Its silvery green-grey color and feathery texture make it an interesting part of any use.

ADENANTHOS "Chris TAL" foliage – can be harvested throughout the year, but growth is slower during winter. It responds well to pruning.

It has a very good shelf life and maintains its color and texture when dried.

It can be planted from spring through summer to autumn and starts yielding after 8 months. Recommended planting density of 500 plants per 1000 m².

ADENANTHOS "Chris TAL" pot plant – can be grown as an ornamental pot plant for indoors and outdoors in pots 8 – 25 cm. Can be grown "wild", or shaped as a Christmas tree, pompon, bonsai etc. by pruning. It is also an excellent screen plant for outdoor gardens.

ADENANTHOS "AVIV" pot plant – is an evergreen crawling plant with silvery green feather like leaves. It makes an excellent pot plant, hanging basket and is a good cover plant for gardens and rockeries. It can be planted all year round.
